3.6 Manual Validation

Prior to accepting a fillable eRx <AC> and moving the eRx to Pending Outpatient Orders file, the Vista patient, provider, and drug/SIG must be validated. The eRx is then further processed using Complete Orders from OERR [PSO LMOE FINISH] or Patient Prescription Processing [PSO LM BACKDOOR ORDERS].

The validation process begins by selecting one of the validate actions from the Summary/Details screen. For training, the sections further will show examples of NewRx processing. The remaining inbound fillable prescriptions follow the same workflow.

NOTE: Before the Drug/SIG on an eRx can be manually validated, the eRx Patient must have a linked Vista patient. The <VD> (Validate Drug/SIG) action has parenthesis around the action to signify this action is not available until a Vista patient is linked, as illustrated in the figure below.

3.6.1 Validate Patient

The patient must be validated before a fillable eRx can be accepted. Information about the Patient Validation screen and editing the patient information is described in the following sections.

To validate patient information, type <VP> VALDIATE PATIENT from the Summary/Details screen. The Patient Validation screen displays and is described in the following sections.

Figure 3.6-2: Validate Patient

3.6.1.1 Patient Auto-Match in the Processing Hub

The following outlines the scenarios for a patient auto-match in the IEP Processing Hub before being sent down to VistA:

Patient Match - Primary Hub

1. MPI Check - receive ICN and SSN from MPI if successful:
 - a. If SSN is sent on a NewRx, then the SSN is used in the auto-match with the MPI along with Last Name, First Name, DOB, Gender, Address Line 1, and Home Telephone Number. If Home Telephone Number is not sent, Primary Telephone is used.
 - b. If SSN is not sent on the NewRx, then the match is be done with MPI against Last Name, First Name, DOB, Gender, Address Line 1, and Home Telephone Number. If Home Telephone Number is not sent, Primary Telephone is used.
 - c. Since only the Last Name, First Name, DOB, and Gender are mandatory on a fillable prescription, the match is done against all the data pieces that are received.
 - d. When a patient is successfully matched, the patient registration at the sites is checked.
2. E&E Check - Then E&E Services is checked to see if the patient is both enrolled and eligible to their system to receive pharmacy benefits (This is done using ICN retrieved from MPI).

Patient Secondary Match in VistA

- Case 1: Patient Auto match successful (MPI record found, E&E check passed, and Patient Site Registration passed).
 - a. Use the ICN received from MPI and check against the local Patient file entry; if passed, then link this VistA patient to eRx Patient.
 - b. If ICN check fails, use the SSN received from MPI and check against the local Patient file entry; if passed, then link this VistA patient to eRx Patient.
- Case 2: MPI Match successful but E&E check failed at the Hub:
 - a. Use the ICN received from MPI and check against the local Patient file entry; if passed, then link this VistA patient to eRx Patient.
 - b. If ICN check fails, use the SSN received from MPI and check against the local Patient file entry; if passed, then link this VistA patient to eRx Patient.
- Case 3: MPI match unsuccessful at the Hub:
 - a. No secondary match.

3.6.1.2 Patient Manual Validation Screen Overview

The header of the Patient Validation screen contains the eRx Patient Name and the eRx Reference #. Below the header is the eRx and VistA information for the patient, including any known allergies where applicable.

If a match was NOT found for the eRx Patient, the screen looks similar to the below figure. The Status field has “NOT VALIDATED”, with “PATIENT NOT MATCHED” below the Status. No VistA patient information displays.

- <H> Hold – Places an eRx on hold.
- <UH> Un Hold – Removes an eRx from a Hold.
- <E> Edit – User edits if the information is empty or incorrect.
- <AV> Accept Validation – User accepts the validation if information is correct.
- <RJ> Reject – Rejects the eRx.

3.6.1.3 Edit Patient

1. Enter <E> Edit to edit the patient information.

2. If a VistA patient already exists for the eRx, the system displays a message confirming the edit.

```
A patient has already matched to a vista patient.  
Would you like to edit the patient? NO// ■
```

Figure 3.6-7: Edit Patient on a VistA Match

3. If a VistA patient match does not exist, the system prompts to select a patient at the “Select Patient Name” prompt. The partial or full name of the patient, DOB or SSN can be entered.
4. Select the correct patient and press <Enter>.
5. A message displays confirming the patient selection. Enter <Y> Yes.
6. The select patient information populates the VistA Patient fields on the Patient Validation screen.

NOTE: A Warning Message displays if there is a DOB, Gender, and/or on the patient selected during the edit process.

CS NOTE: For Controlled Substance eRx records, an additional check is performed for the presence of at least a ZIP CODE for a patient residing in the US or a POSTAL for patients residing abroad. If not found, the message below will be displayed.

```
***** WARNING(S) *****  
SSN mismatch.  
Date of Birth mismatch.  
Gender mismatch.  
Patient does not have a current mailing or residential address on file.  
*****
```

Figure 3.6-8: Mismatch Message

3.6.1.4 Accept Patient Validation

Once the patient information has been edited and reviewed for accuracy, the validation needs to be accepted on the Patient Validation screen.

1. Select <AV> Accept Validation on the Patient Validation screen to accept the provider validation.
2. A message displays confirming whether to mark the patient as validated. Enter <Y> Yes.

If the validation is successful, a message displays indicating that the validation was updated.

The Status changes to “VALIDATED” on the Patient Validation screen, along with the user who performed the validation and date/timestamp.

```

Would you like to mark this patient as VALIDATED?
Enter Yes or No: NO// YES
Validation Updated!!
Type <Enter> to continue or '^' to exit:

```

Figure 3.6-11: Patient Validation Unable To Validate Address Warning

3.6.1.5 Automatic Patient Validation

When a patient validation is accepted on one eRx and there are additional eRxs in the Holding Queue for the same patient, received on the same day, a message displays asking if the patient validation should be applied to the other eRxs. Refer to Figure 3.6-12. If the user selects <Y> Yes, the system links and applies the patient validation for the eRxs currently in the Holding Queue for that patient.

NOTE: Automatic Patient Validation is only available for NewRx.

The determination of the same patient is based on unique records from the ERX EXTERNAL PATIENT file (#52.46). The system only validates the same patients on eRxs that are currently in the ERX HOLDING QUEUE file (#52.49) received at the time of the automatic patient validation. Patient validation is not applied for eRxs received for that patient after the auto validation is applied. For example, if VA receives six eRxs for the same patient on the same day, the user only has to validate the patient once. If eRxs are received later that same day, those eRxs need to be revalidated.

This patient has other prescriptions for: Jun 16, 2020		
Patient: [REDACTED]		
DRUG	PROVIDER	REC DATE

1.) Fluticasone Furoate 27.5	[REDACTED]	JUN 16, 2020

Figure 3.6-12: Automatic Patient Validation

To apply patient validation to other eRxes in the Holding Queue for the same patient, received on the same day:

1. The system asks the user if the previous validation should be applied to the other eRxes received for the patient.

```
Would you like apply the above validation to these prescriptions?
Enter Yes or No: N// O
```

Figure 3.6-13: Apply Patient Validation to Other eRxes

2. Enter **Y** for Yes to apply the validation to the other eRxes for the patient. After selecting **Yes**, the patient validation is applied to the other eRxes. As previously noted, any eRxes received after this action will not be validated.
3. A message displays indicating that the validation was updated.
4. A “[v]” displays to the right of the Vista Patient field on the Summary/Details screen and the Status field changes to “VALIDATED” on the Patient Validation screen, along with the user who performed the validation and date/timestamp. This occurs for all the eRxes validated via the automatic patient validation process.
5. The statuses on all eRxes validated by the automatic patient validation process changes to “I” for In Process.

NOTE: When doing a batch validation for a patient, it is possible that one or more of the records for the patient is for Controlled Substance which requires the presence of at least a ZIP CODE for a patient residing in the US or a POSTAL CODE if they reside abroad. So, a check will be performed for such records and if the requirement is not fulfilled, the record will not be validated. The message below will be displayed for each record with this issue:

```
eRx Patient: [redacted]                DOB: [redacted]

3.6.2 Validate Provider

The provider must be validated before a fillable eRx can be accepted.

To validate provider information, from the Summary/Details screen, type <VM> VALIDATE PROVIDER. The eRx Provider Validation screen displays.

VP VALIDATE PATIENT	VM VALIDATE PROVIDER	VD VALIDATE DRUG/SIG
P Print	RJ Reject	AC Accept eRx
H Hold	UH Un Hold	RM Remove eRx
Select Action:Next Screen//	VM VALIDATE PROVIDER	

Figure 3.6-15: Summary/Details Screen Action - Validate Provider

Information about the Validate Provider display and editing the provider information is described in the following sections.

3.6.2.1 Provider Auto-Match in the Processing Hub

The auto-match on an external provider is based upon the NPI of the prescriber coming in on the new eRx. The NPI is matched against the VistA instance's NEW PERSON file (#200) entry. If the NPI matches and if the Provider is marked "Authorized to Write Meds" that is considered as a match. Upon successful match, the VistA provider is linked with the incoming provider's record in VistA.

3.6.2.2 Provider Manual Validation Screen Overview

The header of the Provider Validation screen contains the eRx Patient Name and the eRx Reference #. Below the header is the eRx and VistA information for the provider, where applicable.

If a match was NOT found for the eRx provider, the screen looks similar to the below figure. The Status field has "NOT VALIDATED", with "PROVIDER NOT MATCHED" below the Status. No provider information displays.

PSO ERX PROVIDER VALIDATION		Jun 18, 2020@14:27:10	Page: 1 of 1

3.6.2.3 Edit Provider

To edit the provider information:

1. Press the <E> Edit action on the Provider Validation screen.
2. If no VistA provider information is in the system for the eRx, the “Select Provider Name” prompt displays for searching for and selecting a provider.
 - a. Enter either the partial name or full name of the provider or the NPI of the Provider, or DEA of the Provider at the “Select Provider Name” prompt. If multiple providers exist with the same name exist, a list of providers is provided with additional identifying information (e.g., middle initial, mail code, and title, where applicable, etc.).
 - b. Select the provider.
3. If a VistA provider is currently linked for the eRx, the system asks if the current provider should be modified.
 - a. Enter <Y> Yes.
 - b. Enter either the partial name or full name of the provider at the “Select Provider Name” prompt.
 - c. Select the provider.

```

Figure 3.6-36: After Provider Validation (Summary/Details Screen)

3.6.2.5 Automatic Provider Validation

When a provider validation is accepted on one eRx and there are additional eRxs in the Holding Queue for the same patient by the same provider, received on the same day, a message displays asking if the other eRxs for the patient written by the provider should be validated. If the user selects <Y> Yes, the system links and applies the provider validation for the eRxs currently in the Holding Queue for the patient by the same provider.

NOTE: Automatic Provider Validation is available only for NewRx.

The determination of the same provider is based on unique records from the ERX EXTERNAL PERSON file (#52.48). The system only validates the same provider on eRxs that are currently in the ERX HOLDING QUEUE file (#52.49) for the same patient received on the same date. Provider validation is not applied for the same provider received after the auto validation is applied once. For example, if VA receives six eRxs for the same patient on the same day from

the same provider, the user only has to validate the provider once; however, if eRxes are received after the automatic provider validation is applied (e.g., later that same day by that provider), the provider for those eRxes needs to be validated.

```

There are other prescriptions for this patient, written by this provider on
Jun 16, 2020
Provider: [REDACTED]
Patient: [REDACTED]

      DRUG                      PROVIDER                      REC DATE
-----
1.) Fluticasone Furoate 27.5 [REDACTED] JUN 16, 2020

Would you like apply the above validation to these prescriptions?
Enter Yes or No: N// O

```

Figure 3.6-37: Automatic Provider Validation

To apply the provider validation to the other eRxes enter <Y> Yes. A message displays indicating that the validation was updated.

- The Status field on all the eRxes, where the provider validation has been applied, changes to “VALIDATED” on the Provider Validation screen and the user who accepted the validation and date/timestamp displays to the right of “VALIDATED”.
- A “[v]” displays to the right of the VistA Provider field on the Summary/Details screen.
- The statuses on all eRxes validated by the automatic provider validation process changes to “I” for In Process.

3.6.3 Validate Drug/SIG

The drug/SIG information on the eRx must be validated before a fillable eRx can be accepted.

NOTE: A VistA patient must be linked (matched) before the Validate Drug/SIG action is available.

To validate drug/SIG information for the eRx, type <VD> Validate Drug/SIG from the Summary/Details screen. The Drug Validation screen displays and is described in the following sections.

```

+ Enter ?? for more actions
VP VALIDATE PATIENT      VM VALIDATE PROVIDER      VD VALIDATE DRUG/SIG
P Print                  RJ Reject                  AC Accept eRx
H Hold                   UH Un Hold                RM Remove eRx
Select Action:Next Screen// VD VALIDATE DRUG/SIG

```

Figure 3.6-38: Validate Drug / SIG

3.6.3.1 Drug Auto-Match in the Processing Hub

The pre-conditions for a drug auto-match in the Processing Hub are that the drug should be a one-to-one match, should not be a Compound, not a Controlled Substance, should be Active, not Investigational and should be marked for Outpatient use in the local DRUG file (#50).

First, the drug description on the new eRx is matched against the Drug Generic Name entry in the VistA instance's DRUG file (#50). If successful, the match stops right here, and the drug is linked in VistA.

If the match is not successful, the drug description is then matched against the VA Product Name entry in the VistA instance's VA PRODUCT file (#50.68). Then a drug in local file for the matched VA Product Name is identified, which should satisfy the preconditions. If the match is successful, the drug is linked in VistA.

If the match is not successful, the NDC is used to match against the VistA instance's NDC/UPN file (#50.67). Using the VA Product Name identified at this step, a drug in the local file for the matched VA Product Name is identified, which should satisfy the preconditions. If the match is successful, the drug is linked in VistA.

NOTE: The NDC is an optional field and may or may not be included with the new eRx. For a supply, if UPC is sent, it is not matched against the NDC/UPN file (#50.67). Only the Drug Description match is attempted.

3.6.3.2 Drug/SIG Manual Validation Screen Overview

The header of the Drug/SIG Validation screen contains the eRx Patient Name and the eRx Reference #. Below the header is the eRx and VistA information for the drug/SIG, where applicable.

If a match was NOT found for the VistA drug, the screen looks similar to the below figure. The Status field has "NOT VALIDATED", with "NOT MATCHED" to the right of the VistA Drug field. The other VistA drug/SIG fields may or may not be populated.

3.6.3.3 Edit Drug/SIG

1. To edit the drug/SIG information, use the <E> Edit action on the Drug Validation screen.
2. If the VistA drug/SIG information has been linked for the eRx, the edit drug/SIG sequence prompts the user to select a field or select All fields.
 - Select Item (s): Quit// <E> Edit
 - Which fields (s) would you like to edit? (1-10) or "A" 11: A//
3. Under eRx Holding Queue > Validate Drug/SIG screen > Edit, if a drug is already matched in the hub, that drug is displayed at the "select" prompt. The user is still allowed to change the drug by entering the drug name.
4. Under eRx Holding Queue > Validate Drug/SIG screen > Edit, if a drug is not matched in the hub, at the "select" prompt, it is blank wherein the user can enter the drug name.
5. When a Yes/No confirmation is asked for the selected drug, if the user hits enter or selects "No", the control comes out of Edit mode back to VD screen.

NOTE: The eRx Drug/SIG information from the external provider displays throughout the edit drug/SIG process as reference.

```
Current Vista Drug: FLUTICASONE PROP 50MCG 120D NASAL INHL
Select DRUG GENERIC NAME: FLUTICASONE PROP 50MCG 120D NASAL INHL//      NT
200      N/F      This drug will not be processed without Drug Request Form 10-7
144

You have selected: FLUTICASONE PROP 50MCG 120D NASAL INHL
Would you like to use this drug/supply?
Enter Yes or No: YES

eRx Drug: Fluticasone Furoate 27.5 MCG/SPRAY Nasal Suspension
eRx Sig:
1 Spray by Each Nare route 2 times daily
eRx Notes: SPRAY 2 TIMES DAYS FOR 10 DAYS

There are 4 Available Dosage(s):
  1. 1 SPRAY
  2. 2 SPRAYS
  3. 1 DROP

Enter RETURN to view additional dosages or '^' to exit the list of dosages:
```

Figure 3.6-41: eRx Display during Edit Drug / SIG

6. Next, enter the Dosage. Either enter a free text dose or enter a question mark <?> to view a list of available dosages. The system prompts the user to confirm the selected dosage.
 - a. Enter the Verb, Route, and Schedule.
 - b. Patient Instructions are default/consistent instructions that come from the Orderable Item. VA Patient Instructions are auto populated when either a drug is auto matched or manually matched, or the drug's Pharmacy Order Item has an entry for those instructions. If it is blank, enter VA Patient Instructions. Or if it needs to be edited, use the Replace function. Even abbreviated Patient Instructions from Medication Instruction files are allowed, which expand upon saving. This field holds the patient instructions for an eRx. This field is transferred to the Pending Queue upon acceptance of an eRx.

- c. Provider Comments are additional free text comments that the provider may enter. The VA Provider Comments field contains the eRX Notes from the external provider and can be edited by entering <Replace>. Even abbreviated Provider Comments from Medication Instruction files are allowed, which expand upon saving. This field is transferred to the Pending Queue upon acceptance of an eRX.
- d. Enter Patient Status and edit the Patient Status as required.
- e. Enter/edit VistA Quantity, VistA Days Supply, and VistA Renewals as needed.

NOTE: The Vista Days Supply prompt is pre-populated with an auto-calculated value given to the user as a suggested value for the Days Supply prompt. This value is displayed as [DAYS SUPPLY:(1-90): 90//], with suggested value behind two forward slashes. This value is derived from the values entered by the user in the Quantity prompt, the Units Per Dose prompt, and the Schedule prompt. The auto-calculated value is the result of dividing the Quantity by the Units Per Dose, then dividing the resulting value by the Schedule (Units Per Dose/Quantity/Schedule). This auto-calculated value is only a suggested entry for the user. The user can enter any amount that fits within the Days Supply range supplied by the eRX software.

When editing the Quantity field after the VistA drug has been linked, the Vista Quantity prompt is pre-populated with an auto-calculated value as a suggested value to the user. This value is displayed as [QTY:(1-90): 90//], with the suggested value behind two forward slashes. This value is derived from the values entered by the user in the Days Supply prompt, the Units Per Dose prompt, and the Schedule prompt. The auto-calculated value is the result of dividing the Days Supply by the Units Per Dose, then dividing the resulting value by the Schedule (Units Per Dose/Days Supply/Schedule). This auto-calculated value is only a suggested entry for the user. The user can enter any amount that fits within the Quantity range supplied by the eRX software.

- f. Enter Routing. Either <M> for Mail or <W> for Window.
- g. The system displays the Default eRX Clinic setup by the site. If it is not configured, this field is blank. The user can select a clinic as required in either case.

NOTE: Setting up the Default eRX Clinic is optional. Sites are encouraged to edit their OUTPATIENT SITE file (#59) to define the default eRX clinic. The following field is added to the OUTPATIENT SITE file (#59): DEFAULT ERX CLINIC field (#10).

Please reference the Implementation Guide – Inbound ePrescribing (PSO*7.0*p581) on the VA Documentation Library (VDL) at the following link for details on setting up the default eRX clinic for a site.

Outpatient Pharmacy VDL URL: <https://www.va.gov/vdl/application.asp?appid=90>

- h. Once all the drug/SIG fields have been edited and the drug/SIG sequence is complete, the edited information displays on the Drug Validation screen.
- i. The next step is to accept the validation <AV>, which is described in the next section.
- j. If you have to edit after this, you can pick the fields:
 - Select Item (s): Quit// E Edit
 - Which fields (s) would you like to edit? (1-10) or “A” 11: A//

NOTE: If the Default eRx Clinic is changed from the one that is configured with the NPI Institution, of the receiving Pharmacy, the eRx may not show up in OERR when processed. Refer to the Implementation Guide – Inbound ePrescribing (PSO*7.0*p581) on the VA Documentation Library (VDL) for details on setting up the Default eRx Clinic for a site.

Figure 3.6-54: Drug Validation eRx VistA Provider Not Authorized Warning Message

3.6.3.3.1 Additional Field-level Information:

- Quantity Unit of Measure is displayed in the eRx Holding Queue > Validate Drug/SIG screen > Edit, along with the reference eRx information.
- eRx Quantity displays up to 5 digits after the decimal in the eRx Holding Queue Summary/Details screen and VD > Edit screen.
- VistA Quantity is displayed same as eRx Quantity if there are 2 digits after decimal places. If there are more than 2 digits after decimal places, VistA Quantity field is left blank so that the user can key in.
- eRx Days Supply displays up to 999 in the eRx Holding Queue Summary/Details screen and VD > Edit screen.
- VistA Days Supply is auto-calculated based on Units Per Dose, Quantity, and Schedule values. User can also key in a desired value in this field.
- eRx Renewals displays up to 99 in the eRx Holding Queue Summary/Details screen and VD > Edit screen.
- VistA Renewals allows a value between 0 and 11 only.
- VistA Renewals is auto-populated based on Dispensing Units, Quantity, and Days Supply values.
- Help text for VistA Quantity is under eRx Holding Queue > Validate Drug/SIG screen > Edit.

3.6.3.3.2 Quantity/Days Supply Work Flow under Validate Drug/SIG > Edit:

Scenario 1: The updated Quantity/Days Supply work flow works in the holding queue for only available dosages such as 40MG, 80MG and so on. The Quantity divided by schedule is then divided by units per dose to provide the Days Supply value.

Available Dosage(s):

1. 40MG
2. 80MG

Scenario 2: Quantity/Days Supply auto-calculation does not function for available dosages such as SMALL AMOUNT/LIBERAL AMOUNT, DROP/DROPS, TEASPOONFUL, PATCH etc. For these available dosages, Holding queue VD screen works similar to CPRS, not auto-calculating Days Supply based on Quantity, Schedule, and Units per dose.

There are 2 Available Dosage(s):

1. 1 DROP
2. 2 DROPS

There are 4 Available Dosage(s):

1. 1 TEASPOONFUL
2. 2 TEASPOONFULS
3. 1 TABLESPOONFUL

There are 3 Available Dosage(s):

1. LIBERAL AMOUNT
2. SMALL AMOUNT
3. MODERATE AMOUNT

Scenario 3: Quantity/Days Supply auto-calculation does not function for drugs when there are no available dosages. Holding queue VD screen works similar to CPRS, not auto-calculating Days Supply based on Quantity, Schedule, and Units per dose.

There are NO Available Dosage(s).

Please Enter a Free Text Dose:

3.6.3.4 Accept Drug/SIG Validation

Once the VistA Drug/SIG information has been edited and reviewed for accuracy, the next step is to accept the validation <AV> on the Drug Validation screen. The system prompts the user to confirm the validation. After entering <Y> Yes, a message displays that the drug validation has been updated.

```

3.7 Accepting eRxes in the eRx Holding Queue

The following conditions must be met, before a fillable eRx can be accepted and transmitted to the Pending Queue for further processing:

1. The eRx cannot be on Hold. If the eRx is on Hold, the eRx status on the Holding Queue List has one of the Hold Status codes, and the Hold Status, Hold Reason, and the user who placed the eRx on hold is displayed on the Summary/Details screen.
2. The eRx cannot have a status of “Rejected” RJ, “Removed” RM, “Processed” PR or “Canceled” CAN/CXQ.

All validation steps, for patient, provider, and drug/SIG must be completed, including the <AV> Accept Validation action on the validate screens. For additional information on the validation steps, refer to section User Manual Unit 1 (PSO_7_0_P617_UM_1_2) available on the Veteran's Documentation Library (VDL).

3.12

3.13

3.14

3.15 Manual Validation

If a user attempts to accept an eRx where one or more of the conditions have not been met, an error message displays indicating that the eRx cannot be processed and the reason.

+ Enter ?? for more actions		
VP VALIDATE PATIENT	VM VALIDATE PROVIDER	VD VALIDATE DRUG/SIG
P Print	RJ Reject	AC Accept eRx
H Hold	UH Un Hold	RM Remove eRx
Select Action:Next Screen// AC Accept eRx		
Errors encountered during processing:		
1.) Patient has not been manually validated.		
2.) Provider has not been manually validated.		
3.) Drug has not been manually validated.		
Cannot process eRx.		

Figure 3.15-1: Accept eRx - Sample Validation Errors

After all the above pre-conditions have been met, to Accept an eRx <AC> from the Summary/Details screen, complete the following steps.

From the Summary/Details screen, type <AC> Accept eRx.

+ Enter ?? for more actions		
VP VALIDATE PATIENT	VM VALIDATE PROVIDER	VD VALIDATE DRUG/SIG
P Print	RJ Reject	AC Accept eRx
H Hold	UH Un Hold	RM Remove eRx
Select Action:Next Screen// AC Accept eRx		

Figure 3.15-2: Accept eRxes

A message displays notifying the user that the eRx was sent to Pending Outpatient Orders for further processing.

```
Select Action:Next Screen// AC    Accept eRx
eRx #396440 sent to PENDING OUTPATIENT ORDERS!
Sending rxVerify Message to prescriber.
Type <Enter> to continue or '^' to exit:
```

Figure 3.15-3: eRxes Sent to Pending Outpatient Orders

The user can then go to Complete Orders from OERR or Patient Prescription Processing to view the eRx information. Refer to section [3.23 Complete Orders from OERR and Patient Prescription Processing](#).

Complete Orders from OERR and Patient Prescription Processing.

NOTE: RxVerify messages are stored in the Hub for reporting purposes only. Unlike in the past, no NCPDP message will be sent back to the originating EHR system indicating that eRx has been accepted.

CS NOTE: All Controlled Substance prescriptions checks for Patient, Provider, and Drug are re-performed at Accept eRx and any issues will prevent the eRx from being accepted.

3.16 Rejecting eRxes in the eRx Holding Queue

Reject is used to remove a fillable eRx from the eRx Holding Queue. Reject must be accompanied by a reject code/reason.

NOTE: Reject messages are stored in the Hub for reporting purposes only. Unlike in the past, no NCPDP message will be sent back to the originating EHR system indicating that eRx has been rejected.

To reject an eRx, complete the following steps:

1. From the Summary/Details screen, type <RJ> Reject.
2. Enter <Y> Yes to confirm the reject.
3. Enter a reason for the rejection. The following reasons are available:
 - PTT01 – Patient not eligible
 - PTT02 – Cannot resolve patient
 - PVD01 – Provider not eligible
 - PVD02 – Cannot resolve provider
 - DRU01 – Not eligible for renewals
 - DRU02 – Non-formulary drug

- DRU03 – Duplicate prescription found for this patient
 - DRU04 – Invalid quantity
 - DRU05 – Duplicate therapeutic class
 - DRU06 – Controlled substances are disallowed
 - ERR01 – Multiple errors, please contact the pharmacy
 - ERR02 – Incorrect pharmacy
 - ERR03 – Issues with prescription, please contact the pharmacy
 - PVD03 – Missing/bad digital signature on inbound CS ERX
 - PVD04 – Prescriber's CS credential is not appropriate
 - PTT03 – Patient's mailing address is missing/mismatched
 - ERR99 - Other
4. Type additional comments as to why the eRx is being rejected and press <Enter>. These comments are optional.

```
Select Action:Next Screen// RJ    Reject
Would you like to 'Reject' eRx #395911? Y// ES
Select REJECT reason code: PTT02    Cannot resolve Patient
Additional Comments (Optional):

Rejection message sent.
Type <Enter> to continue or '^' to exit:
```

Figure 3.16-1: Rejecting an eRx

Once the eRx is rejected, the details of the reject message are available in the IEP Processing Hub as reference. Refer to Figure 3.16-2.

3.19 Placing eRxes on Hold in the eRx Holding Queue

A fillable eRx can be placed on hold for several reasons indicating that there is an issue with the eRx.

1. To place an eRx on hold, type <H> Hold from the Summary/Details screen or any of the validate screens.
2. Enter a hold reason from the available reasons. The following reasons are available:
 - HPT – PATIENT NOT FOUND
 - HPD – PROVIDER NOT FOUND
 - HNF – NON-FORMULARY DRUG THAT NEEDS APPROVAL
 - HSO – INSUFFICIENT STOCK
 - HDI – DRUG-DRUG INTERACTION
 - HAD – ADVERSE DRUG INTERACTION
 - HBA – BAD ADDRESS
 - HPC – PROVIDER CONTACTED
 - HPA – PRIOR APPROVAL NEEDED
 - HOR – OTHER REASON
 - HPP – PATIENT CONTACTED
 - HPR – HOLD DUE TO PATIENT REQUEST
 - HQY – QUANTITY OR REFILL ISSUE
 - HCR – PRESCRIBER’S CS CREDENTIAL IS NOT APPROPRIATE
 - HWR – CS PRESCRIPTION WRITTEN/ISSUE DATE HAS PROBLEMS
 - HIS – PROVIDER DEA# ISSUE
 - HRX – HOLD FOR RX EDIT
 - HDE – DRUG USE EVALUATION
 - HTI – THERAPUTIC INTERCHANGE
3. To view the available hold reasons, enter a double question mark <??> at the “Select HOLD reason code” prompt, refer to Figure 3.19-1. The available hold reasons display.

Figure 3.19-4: Hold Status in Status Column

NOTE: When a fillable eRx is put on 'Hold' the only actions available for the user are UH/Un Hold, P/Print and SH/Status History.

3.20 Un Hold eRx in the eRx Holding Queue

eRxs may be removed from a hold by typing <UH> Un Hold. Users who see the Un Hold function in parentheses “()” are not able to remove an eRx from a hold.

VP VALIDATE PATIENT	VM VALIDATE PROVIDER	VD VALIDATE DRUG/SIG
P Print	RJ Reject	AC Accept eRx
H Hold	UH Un Hold	RM Remove eRx
Select Action:Next Screen// U Un Hold		

eRx removed from hold status, and placed to 'In process'.
Type <Enter> to continue or '^' to exit: █

Figure 3.20-1: Un Hold eRx

NOTE: When a user exercises Un Hold option on a NewRx record that is in one of the Hold statuses, if all the 3 validations (Patient, Provider, and Drug/SIG) are complete, the eRx record's status changes to “W” (Wait). When a user exercises Un Hold option on a NewRx record that is in one of the Hold statuses, if all the 3 validations (Patient, Provider, and Drug/SIG) are not complete, the eRx record's status changes to “I” (In Process).

3.21 Removing eRxs in the eRx Holding Queue

A fillable eRx can be removed from the Holding Queue without sending a message back to the originating external provider. Sample scenarios include, but are not limited to, the patient requested that the eRx not be filled, or the user has been unable to contact the provider or patient for a significant amount of time.

To remove an eRx from the Holding Queue:

1. From the Summary/Details screen, type <RM> Remove.
2. Enter a reason for the eRx removal. The following removal reasons are available:
 - REM01 - Drug out of stock or on backorder and unavailable for processing
 - REM02 - Patient was not able to pick up
 - REM03 - Prescription canceled by Provider
 - REM04 - Prescription processed manually
 - REM05 - Provider will cancel this eRx and submit another
 - REM06 - Unable to mail prescription and patient unable to pick up
 - REM07 - Unable to contact patient
 - REM08 - Unable to contact provider
 - REM91 - Undefined system error
 - REM92 – Other
 - REM09 – ERX Issue not resolved - Provider contacted

3. Type additional comments as to why the eRx is being removed and press <Enter>. These comments are optional.

Once the eRx is removed, the status changes to “RM” and it no longer displays in the default Holding Queue List; however, the eRx can be accessed via the search action from the main Holding Queue List screen using one or more of the search criteria. Refer to section [3.22.1 Searching eRXes](#).

VP VALIDATE PATIENT	VM VALIDATE PROVIDER	VD VALIDATE DRUG/SIG

available for processing		
Additional Comments (Optional): For User Manual updates		

Figure 3.21-1: Removing an eRx

NOTE: If the Remove function is in parentheses “()”, the user is not able to remove an eRx. If the action is still attempted, the user receives a message that the action is not available.

3.22 Searching and Sorting in the eRx Holding Queue

Users can search and sort eRxes in the Holding Queue. Searching and sorting eRxes is described in the following sections.

3.22.1 Searching eRxes

Searching and filtering of eRxes is available by typing <SR> Search Queue at the “Select Action” prompt. The Search Queue screen displays. Users can search using one or more of the following search criteria in the Traditional View:

1. PATIENT NAME
2. DATE OF BIRTH
3. RECEIVED DATE RANGE
4. PROVIDER NAME
5. ERX STATUS
6. DRUG NAME
7. MESSAGE TYPE
8. ERX REFERENCE NUMBER

```
Select Action:Next Screen// SR      Search Queue

1.) PATIENT NAME
2.) DATE OF BIRTH
3.) RECEIVED DATE RANGE
4.) PROVIDER NAME
5.) ERX STATUS
6.) DRUG NAME
7.) MESSAGE TYPE
8.) ERX REFERENCE NUMBER
```

Figure 3.22-1: Search Queue Actions

- The display contains all eRxes satisfying the search criteria. The list is refreshed depending on the action performed. After an action is performed, the user can return to the original filtered list.
- The number of eRx records displayed in the Holding Queue’s list view is based on the ERX DEFAULT LOOKBACK DAYS file (#10.2) configured in OUTPATIENT SITE file (#59).
- By default, the ERX DEFAULT LOOKBACK DAYS field is blank, so the software goes back 365 days.
- If the Pharmacy user would like to see eRx records received from older dates, the user can use the Search (SR) option and select the “Received Date Range” (#3), to retrieve those records.

3.22.1.1 Search eRx – Patient Name

Users can search by patient name. A search initiated with a partial patient name may return multiple patient names, from which one patient can be selected. Selecting a patient displays the eRxes for that patient.

To search by patient name:

1. From the eRx Holding Queue List screen, type <SR> Search Queue.
2. From the Search Queue, type <1> or PATIENT NAME.

```
Select Action:Next Screen// SR      Search Queue

1.) PATIENT NAME
2.) DATE OF BIRTH
3.) RECEIVED DATE RANGE
4.) PROVIDER NAME
5.) ERX STATUS
6.) DRUG NAME
7.) MESSAGE TYPE
8.) ERX REFERENCE NUMBER

Select one of the following search criteria:
Enter response: 1 PATIENT NAME
```

Figure 3.22-2: Search Criteria - Patient Name

Figure 3.22-20: Search by eRx Reference Number Results – Inbound eRx Message Type

Under Patient Centric View, the user can use the following Search options:

1. Patient Name
2. Date of Birth
3. eRx Reference Number

3.22.2 Sorting eRxes

VA users can sort eRxes in the Holding Queue List. Sort parameters are retained at the user level when reentering the original list during the same session (i.e., when performing an action on an eRx and then reentering the eRx list). The default sort order of the Holding Queue List is the following:

1. Date Received - Oldest date to Newest date.
2. Secondary sort by PATIENT NAME.
3. Grouped by Controlled Substance

Additional sorting of eRxes is available by typing <SO> Sort Entries.

- The number of eRx records displayed in the Holding Queue's list view is based on the ERX DEFAULT LOOKBACK DAYS file (#10.2) configured in OUTPATIENT SITE file (#59).
- By default, the ERX DEFAULT LOOKBACK DAYS field is blank, so the software goes back 365 days.
- If the Pharmacy user would like to see eRx records received from older dates, the user can use the Search <SR> option and select the "Received Date Range" (#3), to retrieve those records.

7.) MESSAGE TYPE

Select one of the following sort criteria:
Enter response: 6 DRUG NAME

Do you want to group by controlled substance?
Enter Yes or No: YES// █
```

Figure 3.22-33: Group by Controlled Substance

4. The entries sort by Drug Name in ascending order.

3.22.2.7 Sort eRx – Message Type

1. From the eRx Holding Queue List screen, type <SO> Sort Entries.
2. Type <7> or MESSAGE TYPE.

```
Select Action:Next Screen// SO Sort Entries

1.) PATIENT NAME
2.) DATE OF BIRTH
3.) RECEIVED DATE
4.) PROVIDER NAME
5.) ERX STATUS
6.) DRUG NAME
7.) MESSAGE TYPE

Select one of the following sort criteria:
Enter response: 7 MESSAGE TYPE
```

Figure 3.22-34: Sort Criteria – Sort by Message Type

3. Enter Yes or No to group by Controlled Substance. If the user selects ‘Yes’, prescriptions are grouped by Controlled Substance for each sort. If the user selects ‘No’, the prescriptions are not grouped by a Controlled Substance for each sort.

```
Select Action:Next Screen// SO Sort Entries

1.) PATIENT NAME
2.) DATE OF BIRTH
3.) RECEIVED DATE
4.) PROVIDER NAME
5.) ERX STATUS
6.) DRUG NAME
7.) MESSAGE TYPE

Select one of the following sort criteria:
Enter response: 7 MESSAGE TYPE

Do you want to group by controlled substance?
Enter Yes or No: YES//
```

Figure 3.22-35: Group by Controlled Substance

4. The entries sort by Message Type in ascending order.

3.23 Complete Orders from OERR and Patient Prescription Processing

Following all the validation steps for patient, provider, and drug/SIG, and after the eRx has been accepted, the eRx advances to Pending Outpatient Orders file for further processing. The eRx is further finished using either Complete Orders from OERR or Patient Prescription Processing.

The “&” symbol indicates that an eRx was received from an external provider. eRx records without the “&” symbol are VA eR_Xes.

Figure 3.23-7: eRx Order in Pending Queue - Page 5

NOTE:

- “eRx Date” on Holding Queue Summary screen – Date when the eRx was received in the VistA Holding Queue.
- “Date Written” on Validate Drug/SIG screen – Date when the eRx was received in the VistA Holding Queue.
- “Issue Date” on OERR/Backdoor Orders Summary screen – Effective Date if sent by the provider; if not, it is Written Date, both as sent on the eRx.
- “Written Date” displayed on Track/Audit screen on web GUI – Written Date as sent on the eRx.
